

# Specialty Meats Supplier Streamlines Workflow and Sees 50% Decrease in Purchase Order and Accounts Payable Processing Time

**Industry:** Wholesale and Retail Specialty Meats Supplier  
**Solutions Implemented:** Content Management & Workflow Integration

*"This implementation was enjoyable! The James Engineering team had the ability to recommend industry best practices and guide us through the implementation."*

**-Gail Harder, Controller, Neuske's**

## Strategic Issue

Neuske's was encumbered by manual purchase orders, vendor invoicing and payment processing for two distinct business verticals. Neuske's needed to move away from a legacy of paper-based systems between multiple locations and incorporate an updated workflow process so they could scale their business to meet growth objectives. Employees held concerns about digitizing the two separate Enterprise Resource Planning (ERP) systems, expecting a cumbersome transition period. Neuske's was looking for a way to integrate their autonomous ERPs as well as an outside resource with a proven record of expertise to facilitate the project.

## The James Solution

A James Solutions Group engineer helped integrate Neuske's existing ERPs into one, easy-to-use interface with DocuWare's content management system. The dashboard platform made it simple for the internal team to search for documents and as a result, Neuske's experienced a 50% reduction in time spent on all purchase order related accounts payable processing. The project took less than 60 days from project initiation to launch, delivering a fast, effective workflow integration that increased overall productivity and efficiency.
